Project Description

The "Smart Vehicle Connectivity Platform" is a forward-looking initiative aimed at transforming vehicle communication through **advanced IoT integration**. The platform will enable **real-time monitoring** and **predictive maintenance** by leveraging **large-scale data analytics**. A key priority of the project is to address **cybersecurity challenges** in modern vehicles, ensuring protection against potential threats that could affect performance and safety. Additionally, the project emphasizes enhancing the driver's experience by incorporating **user-centric interfaces** designed with intuitive UX/UI principles. These efforts aim to elevate both the **intelligence of the vehicles** and **driver engagement**.

Project Requirements

The project requires the following personnel:

1. **IoT Development**
   - **Positions:** 3
   - **Seniority:** Senior
2. **Cybersecurity Analysis**
   - **Positions:** 2
   - **Seniority:** Mid-Level
3. **UX/UI Design**
   - **Positions:** 1
   - **Seniority:** Junior

Project Timeline and Budget

- **Start Date:** December 1, 2023
- **End Date:** July 1, 2024
- **Estimated Budget:** €900,000

Application Status

- **Current Status:** Submitted
